keazercanlas@gmail.com | +63 920-614-5581 | Tarlac, Philippines

[linkedin.com/in/andreas-keazer-canlas-84269b3b9](https://www.linkedin.com/in/andreas-keazer-canlas-84269b3b9) | Portfolio: rezkae.vercel.app | github.com/rezkae

PROFILE

Detail-oriented software developer with full-stack experience building, debugging, and validating web and mobile-responsive applications. Comfortable working independently to test features across scenarios, spot edge cases, and write clear, reproducible bug reports. Strong written and spoken English, reliable communicator, and available for flexible part-time remote hours.

SKILLS

QA & Testing: Manual & functional testing, edge-case identification, bug reproduction & documentation, UI/UX flow testing, regression testing, cross-browser/cross-platform validation

Technical: TypeScript, JavaScript, Python, Java, React, Node.js, FastAPI, HTML/CSS, SQL/PostgreSQL, Figma, Git/GitHub

WORK EXPERIENCE

The Petshop Boys Co.

Apr. 2025 – Mar. 2026 | Tarlac, Philippines

- Built and continuously tested a Point-of-Sale (POS) system, verifying calculations and workflows across a range of real sales scenarios before rolling out changes.
- Maintained rigorous accuracy across store expenses, revenue, and inventory logs through systematic data entry and cross-checking, catching small errors before they became bigger problems.
- Engaged directly with customers to understand their needs and translate feedback into product and process improvements.

Go Baluyot & Adion Law Office

Jun. 2025 – Jul. 2025 | Tarlac, Philippines

- Automated a billing pipeline (Excel–SQL interface) and validated every output against corporate templates to guarantee consistent, client-ready receipts.
- Diagnosed hardware and network issues, delivering hands-on IT support and translating technical findings into clear, actionable recommendations.
- Implemented and tested a router-based file-sharing system and network printer mapping to resolve server capacity limits.

PROJECTS

AI-Assisted Clinical Management Platform (Bachelor's Thesis)

Apr. 2026

- Sole developer of a full-stack platform for AI-assisted skin lesion detection. Built a dual-model pipeline with automated disagreement flagging and cosine-similarity tie-breaking to catch and reduce false negatives, applying a quality-first mindset to validating AI output.
- Designed and manually tested end-to-end workflows (patient/lesion records, AI analysis, similar-case lookup, role-based access) across web and cloud deployments, verifying behavior for each user role before release.

AI-Powered Hotel Concierge Chatbot

Sep. 2026

- Built and tested a guest-facing chatbot handling booking questions and requests, with an automated fallback to a contact form for queries outside its scope, verified across a range of conversational edge cases.
- Developed an admin dashboard for document uploads and usage stats, deployed to a live production environment.

Exercise Lab (Case Study Project)

Dec. 2024

- Tested and validated an interactive BMI calculator across multiple unit systems (kg/lbs, ft/cm) and edge-case inputs to ensure calculation accuracy.
- Verified responsive UI/UX flows across a 4-person team's fitness website, covering sign-up/login and six exercise categories on multiple screen sizes.

NomVet Clinic (Case Study Project, Visual Basic)

Dec. 2024

- Built and tested a landing page with an admin dashboard, confirming access control and analytics tracking functioned correctly across user roles.

EDUCATION

Tarlac State University, B.S. Computer Science

Graduated: July 2026 | Tarlac, Philippines

Final Cumulative GWA: 2.0

ADDITIONAL

Certificates: Cisco "CCNAv7: Switching, Routing, and Wireless Essentials" (Jun 2024) · Cisco "CCNAv7: Introduction to Networks" (Jan 2024)
